WORK EXPERIENCE

FineDine, Istanbul - Frontend Developer

2018 - Present

FineDine is a digital menu platform which enables merchants like restaurants, bars or any other service to share their menus to customers all around the world swiftly and hassle-free. As an aspiring frontend developer, this job gave me a chance to develop applications for thousands of people from more than 60 countries. I'm fairly confident that all these aspects of this job widen my vision and strengthen my confidence. I worked on technologies such as **Angular, Ionic, HTML5, SCSS, Node.js, Express.js, React.js**. In addition to these technologies I also have had a chance to work on different platforms. For payment I worked with **Stripe** and **Checkout**. Also, I had a chance to work with **Heroku**. The highlight of this job for me is Mobile Menu for FineDine which can be seen from here fndn.mn/finedine-cafe-1.

Netuce, Istanbul - Junior Frontend Developer

September 2018 / Novemb 2018

This was my very first experience as a frontend developer. I worked mainly on frontend of the couple of applications which are CRM, CMS and municipality projects. Although I worked as frontend developer, my developing experience enhanced on different aspects as well. Such as agile methodologies on a real project, working with a backend team, soft skills.

In the course of this period the work I've done was based on **ES6 (Javascript), JQuery, MySQL, CSS and HTML**. I can easily say that, improved my skills drastically on these topics.

Visar, Istanbul - Long Term Intern

April 2017 / September 2017

I had taken my first steps into my career with this internship. I had met with new technologies such as **Augmented Reality, Computer Vision** and worked on them without hesitation. This was the very first time that I had read a whole academic paper and analyzed by myself. This internship made me greedier about new things ever before. During this internship, I worked with several technologies such as **Augmented Reality, Unity, OpenCV, Node.js, Firebase, Python**

Chaptify, Istanbul - Co-founder / Frontend Developer

July 2018 / January 2019

I also attempted to establish a startup with my friends for a while. Chaptify is a platform where you can write/read/collaborate stories with other people on different platforms.

I was one of the co-founders and the only frontend developer in this project. I mainly worked with **Vue.js, SCSS, Bootstrap, Netlify, REST API**.

MUFERobotics, Istanbul - Team Member

November 2016 / March 2019

I am trying to pursue my career in the direction of new things and technologies. In order to accomplish my desire, I joined MufeRobotics Team. Throughout this membership I made a lot of friends, learned new things such as **Arduino, Python, C, Raspberry Pi, Orange Pi, Embedded Systems**. My responsibilities can be listed as Being a part of a team, which produces robots from scratch. (Programming, Design, New ideas) Helper for the newbies, learner for the experienced. Organizer and contributor for our yearly Robot Olympics.

EDUCATION

- **Budapest University of Technology and Economics - February 2018 - June 2018**

This was the breakthrough of my life up until now. I think, I have completely changed after this great experience. Now, I feel more like a citizen of the world. Different cultures and people made me more mature person and developer.

- **Marmara University Computer Science Engineering (2016 – 2020) Kadikoy/Istanbul**
- **Enerjisa Bandirma Science High School (2011 – 2015) GPA: 93,79/100 Bandirma/Balikesir**

MY HOBBIES

I am big fan of running, cycling and outdoor activities. I regularly run with my crew. Also have a big goal aside from my career which is running a marathon in Antarctica. Because why not?

SIDE PROJECTS

Whenever I bump into a problem, I first think about how to solve the problem with my skillset. These side projects are aimed to solve my problems and indirectly others.

- **Let me order - <https://github.com/sayinserdar/Let-me-order>**

Like all the other people I also spend a lot of time to decide what should I order. This google chrome plugin removes restaurants from the list of local food delivery service "Yemeksepeti" (a.k.a Turkish Delivery Hero) every minute or any specified interval of time. I thought with less options it's easier to decide.

- **Figma UI Test Generator - <https://github.com/sayinserdar/testor/>**

While I work with my colleagues in FineDine I was writing UI tests for almost every component in Figma. I thought I could ease this exhaustive problem with generating UI Tests using Figma API.

- **Personal Blog - serdar.netlify.app**

Sometimes I have the urge to jot down my thoughts or just blog about some technology related stuff. I also use my personal blog as playground for new technologies as well.

ACHIEVEMENTS

- Marmara University - Moscow State University Russian A1 Certificate
2016-06
- Nasa Space Apps Challenge - People's Choice Award - Istanbul/ Turkey
2017-04
- Istanbul Technical University Robot Olympics (ITURO) - Category Scenario Winner 2017-04
